On this page you can define some features of your mail account and the conduct of the mail system.

Mail download by mail client setup

The mail system facilitates downloading of your mail by your mail client (Mozilla Thunderbird, MS Outlook). For your mail client to operate faultlessly you need to set up the following:

Inbox server

Server type:	POP3
Port:	995
Server address:	mail.is.paneurouni.com
Account:	login (your username)
Password:	***** (your password to UIS)

Outgoing mail server

Server type:	SMTP
Server address:	smtp.your_provider.sk

For the inbox and outbox server you need to set secured connection (SSL). The certificate is signed by a certificate authority of and for correct operation it needs to be accepted.

Below you need to permit the distance reading to download your mail.

Allow distant e-mail reading: ☒

For POP3 protocol, it is recommended to tick the option in your mail client to store copies of e-mails on the server.
